Supervisory Patent Examiner, Art Unit 2814	Examiner, Art Unit 2814					

Continuation of 11: does NOT place the application in condition for allowance because:

Applicant argues:

Support for the objected to claim term, the corresponding new drawing figures 5 and 6 and amended specification is in the as filed specification and is not new matter. The specification discloses two separate and distinct embodiments in specification, page 2, lines 29-37 and in page 4, lines 16 et seq.

Examiner's reply:

Applicant's arguments are not persuasive. The originally filed specification or drawings do not teach the claimed limitation "where the gate electrode of the charging FET is directly capacitively couple to one of the source/drain electrodes of the charging FET to thereby provide a potential at the gate electrodes of the charging FET solely via the capacitive coupleing." (underline added) Although the specification teaches that the gate electrode of the charging FET is capacitively coupled to a source/drain electrode of the charging FET. This teaching does not exclude the gate electrode of the charging FET from being coupled to other elements in the circuit, to "thereby provide a potential at the gate electrode of the charging FET." Thus, unless otherwise clearly indicated, it does not teach the potential being provided at the gate electrode of the charging FET solely via the capacitive coupling.

All other arguments presented by the applicant have been considered and addressed in a prior Office action.
